

Timeless Flooring Engineered From Centuries Old Wood

Ark’s Reclaimed Engineered Flooring combines the time-tested durability of centuries old wood and next generation engineering to deliver consistent, architectural-grade flooring at practically any scale.

Aesthetics

Never to be grown again for commercial use, old-growth, southern yellow heart pine is prized for its tight vertical grain, subtle historical reveals and deep, resinous sheen.

Hardness & Stability

‘Aged in place’ for centuries, this highly stable wood installs over virtually any subfloor, resists shrinking and warping and is of comparable hardness to White Oak.

Affordability

Combining the aesthetic beauty of an old-growth, heart pine lamella and a 15mm, 11-ply, Baltic Birch Plywood core, Ark’s engineered architectural-grade flooring offers both beauty and affordability at scale.

Finish

Available in a variety of colors, tints and tones, Bona Traffic HD® provides unsurpassed scuff, scratch and chemical resistance at full cure.

Milling

Precision milling of face, tongue and grooves by diamond tipped tooling delivers consistency of finish from board to board and easy and predictable installation.

Reliability

Chisel and bond line tested to ensure proper bonding between wear layer and core, guaranteeing Ark’s reclaimed wood flooring will stand the test of time- *again*.

Applications

Ready for use in a variety of commercial, hospitality, healthcare, educational, residential, performing arts, and museum settings.

Measurements	
Wear Layer	5mm
Plank Widths	4" , 8" , 12"
Plank Lengths	2' - 12'
Plank Thickness	¾"
Core	15mm, 11 ply
